Address: ‹Vishwakarma Nilaya›, Ashoknagar , Kallya village, Karkala
Udupi district-574244

SUMMARY

A Computer Science & Engineering student with a strong desire to learn, grow, and contribute in a professional environment. Committed to building valuable skills and delivering high-quality work. Seeking an opportunity in a forward-thinking organization to apply academic knowledge, support team goals, and grow both personally and professionally.

EDUCATION

Bachelor of Engineering - Computer Science & Engineering 2022-Present CGPA:8.78

Mangalore Institute of Technology & Engineering

Senior Secondary (12th) - KSEEB 2021-2022 Percentage:92.5

Nitte SAM PU College, Nitte

Secondary School(SSLC) - KSEEB 2019-2020 Percentage:92.64

Little Flower English Medium High School Ranganpalke

SKILLS

Languages : C,Java,Python

Interface : HTML, CSS, React js.

Database : SQL,MongoDB

Tools : MYSQL, Visual Studio Code, Solid edge,Git&Github

Technologies : Machine Learning ,NLP,Web Development

PROJECTS

Airbnb Price Prediction System August 2025

Developed a machine learning project to predict Airbnb listing prices based on factors like location, property type, and available amenities. The model analyzes past data to understand what influences pricing. It uses Python, pandas, scikit-learn, and matplotlib for data cleaning, model training, and visualization. Algorithms like Linear Regression and Random Forest are used for accurate predictions. The project helps hosts set fair prices and travelers find good deals. A simple Flask or Streamlit interface can be used to display the predicted prices interactively.

COVID-19 Data Analysis Project September 2025

Performed detailed data analysis on a COVID-19 dataset to study trends in cases, recoveries, and deaths across different countries. Used Python, pandas, and matplotlib to clean, process, and visualize the data. Created charts and

graphs to show how the virus spread over time and compared the impact between regions. The project helps understand key patterns such as peak infection times and recovery rates. It demonstrates skills in data analysis, visualization, and insight generation from real-world health data.

AI-Driven Mental Health Support System| Group of 4 November 2025

Technologies: Python, Natural Language Processing (NLP), Sentiment Analysis, 3D Modeling Chatbot Frameworks
This project helps people get mental health support through a virtual AI-powered therapist that users can talk to anytime. It understands emotions and gives helpful, caring responses using techniques like CBT and mindfulness. The system is useful for those who can't easily access therapy due to cost, stigma, or distance. It offers a private, easy, and affordable way to improve mental well-being .

Weather Dashboard June 2025

Developed a web application that allows users to search for any city and view real-time weather details including temperature, humidity, wind speed, and a 5-day forecast. The app fetches data dynamically from the OpenWeatherMap API using Axios and displays it with clean, responsive UI built in React.js. Implemented error handling to manage invalid city inputs or API issues gracefully. A lightweight Node.js + Express backend was added to securely handle API requests. Users can also save favorite cities for quick access and view weather icons representing current conditions. This project demonstrates skills in API integration, asynchronous data handling, and modern frontend development.

Blog Platform with User Authentication July 2025

Created a full-stack blogging web application that allows users to register, log in, and write, edit, or delete their own blog posts. The platform also enables users to comment on other posts, while admins can manage posts and comments across the site. It uses React.js for the frontend, Node.js + Express for the backend, and SQLite/MongoDB for storing users, posts, and comments. JWT authentication and bcrypt password hashing ensure secure user login and access control. The site features CRUD operations, responsive design, and smooth navigation using React Router. This project demonstrates full-stack development, API integration, and authentication handling in a real-world web app.

COURSES & WORKSHOPS

- Certified in the course Introduction to artificial intelligence provided by Infosys Springboard in the year 2023.
- Certified in the course Carrier essentials in generative ai by Microsoft and linkedin in the year 2023
- Certified in the course Intro to software engineering by forage in the year 2024
- Certified in the course Introduction to Internet of things provided by NPTEL in the year 2023.

ACHIEVEMENTS & ACTIVITIES

- Participated in the PROMPT WARS-10/5/2025 organized by C.O.R.E andCrypton,2025
- Participated in the Girl Hackathon 2025 Conducted by the GOOGLE.
